LAB REPORT on

BIG DATA ANALYTICS (20CS6PEBDA)

Submitted by

Alok Kumar Rastogi (1BM19CS192)

in partial fulfillment for the award of the degree of BACHELOR OF ENGINEERING
in
COMPUTER SCIENCE AND ENGINEERING

B.M.S. COLLEGE OF ENGINEERING
(Autonomous Institution under VTU)
BENGALURU-560019
May-2022 to July-2022

B. M. S. College of Engineering,

Bull Temple Road, Bangalore 560019 (Affiliated To Visvesvaraya Technological University, Belgaum)

Department of Computer Science and Engineering

CERTIFICATE

This is to certify that the Lab work entitled "BIG DATA ANALYTICS" carried out by Alok Kumar Rastogi (1BM19CS192), who is bonafide student of B. M. S. College of Engineering. It is in partial fulfillment for the award of Bachelor of Engineering in Computer Science and Engineering of the Visvesvaraya Technological University, Belgaum during the year 2022. The Lab report has been approved as it satisfies the academic requirements in respect of a BIG DATA ANALYTICS - (20CS6PEBDA) work prescribed for the said degree.

Dr.Shyamala GAssistant Professor
Department of CSE
BMSCE, Bengaluru

Dr. Jyothi S NayakProfessor and Head

BMSCE, Bengaluru

Index Sheet

SI. No.	Experiment Title	Page No.
1	Employee Database	5
2	Library	7
3	Mongo (CRUD)	8
4	Hadoop installation	11
5	HDFS Commands	12
6	Create a Map Reduce program to	15
	a) find average temperature for each year from NCDC data set.b) find the mean max temperature for every	
	month	
7	For a given Text file, Create a Map Reduce program to sort the content in an alphabetic order listing only top 10 maximum occurrences of	20
	words.	
8	Create a Map Reduce program to demonstrating join operation	23
9	Program to print word count on scala shell and print "Hello world" on scala IDE	28
10	Using RDD and Flat Map count how many times each word appears in a file and write out a list of words whose count is strictly greater than 4 using Spark	29

Course Outcome

CO1	Apply the concept of NoSQL, Hadoop or Spark for a given task	
CO2	Analyze the Big Data and obtain insight using data analytics mechanisms.	
CO3	Design and implement Big data applications by applying NoSQL, Hadoop or Spark	

Lab₁

Employee Database

Program 1. Perform the following DB operations using Cassandra.

- 1. Create a key space by name Employee
- 2. Create a column family by name Employee-Info with attributes Emp_Id Primary Key, Emp_Name, Designation, Date_of_Joining, Salary, Dept_Name
- 3. Insert the values into the table in batch
- 4. Update Employee name and Department of Emp-Id 121
- 5. Sort the details of Employee records based on salary
- 6. Alter the schema of the table Employee_Info to add a column Projects which stores a set of Projects done by the corresponding Employee.
- 7. Update the altered table to add project names.
- 8 Create a TTL of 15 seconds to display the values of Employees.

1.

CREATE KEYSPACE Employee WITH REPLICATION = { 'class' : 'SimpleStrategy', 'replication_factor': 1 };

cqlsh> DESCRIBE KEYSPACES

```
cqlsh> CREATE KEYSPACE Employee WITH REPLICATION = {
    ... 'class': 'Simplestatergy',
    ... 'replication_factor': 1
    ... };

ConfigurationException: Unable to find replication strategy class 'org.apache.cassandra.locator.SimpleStatergy'

cqlsh> CREATE KEYSPACE Employee WITH REPLICATION = { 'class': 'SimpleStrategy', 'replication_factor': 1 };

cqlsh> DESCRIBE KEYSPACES

system_schema system_auth system system_distributed employee system_traces

cqlsh> USE Employee
    ...:
```

system_schema system_auth system system_distributed employee system_traces

```

Hadoop installation

SCREENSHOT OF HADOOP INSTALLATION

[shashi@Shashis-MacBook-Air-2 ~ % hadoop -version ERROR: -version is not COMMAND nor fully qualified CLASSNAME. Usage: hadoop [OPTIONS] SUBCOMMAND [SUBCOMMAND OPTIONS] hadoop [OPTIONS] CLASSNAME [CLASSNAME OPTIONS] where CLASSNAME is a user-provided Java class

OPTIONS is none or any of:

--config dir --debug --help buildpaths

hostnames list[,of,host,names] hosts filename

loglevel level workers

Hadoop config directory

turn on shell script debug mode usage information

attempt to add class files from build tree

hosts to use in slave mode

list of hosts to use in slave mode set the log4j level for this command

turn on worker mode

SUBCOMMAND is one of:

Admin Commands:

get/set the log level for each daemon deemonloo.

Client Commands:

archive create a Hadoop archive checknative

check native Hadoop and compression libraries availability classnath prints the class path needed to get the Hadoop jar and the

required libraries

validate configuration XML files credential interact with credential providers distab distributed metadata changer

copy file or directories recursively distop dtuti1 operations related to delegation tokens envvars display computed Hadoop environment variables

run a generic filesystem user client

submit a mix of synthetic job, modeling a profiled from aridmix.

production load

jar <jar> run a jar file. NOTE: please use "yarn jar" to launch YARN

applications, not this command. prints the java.library.path

kdiag Diagnose Kerberos Problems kerbname show auth_to_local principal conversion

key menage keys via the KeyProvider rumenfolder scale a rumen input trace convert logs into a rumen trace

rumentrace manage metadata on 83 s3guard

trace view and modify Hadoop tracing settings

print the version

Daemon Commands:

inipath.

run KMS, the Key Management Server

registrydns run the registry DNS server

SUBCOMMAND may print help when invoked w/o parameters or with -h.

HDFS Commands

Execution of HDFS Commands for interaction with Hadoop Environment. (Minimum 10 commands to be executed)

```
c:\hadoop_new\sbin>hdfs dfs -mkdir /temp

Achies Diminial*

Achies Dimin
```

Create a Map Reduce program to

- a) find average temperature for each year from NCDC data set.
- b) find the mean max temperature for every month

For the given file, Create a Map Reduce program to

a) Find the average temperature for each year from the NCDC data set.

```
// AverageDriver.java package temperature;
```

```
